Cancer studies being done today are poised to become tomorrow's standard of care.

Staying ahead of cancer

Northwestern Memorial Hospital in partnership with the Robert H. Lurie Comprehensive Cancer Center of Northwestern University, a National Cancer Institute (NCI)-designated Comprehensive Cancer Center, are committed to providing our patients with the most advanced treatments available today.

Through controlled research studies known as clinical trials, patients have access to advanced therapies and treatments that can help future generations live longer, healthier lives. The clinical studies being done at the Lurie Cancer Center today are poised to become tomorrow's standard of care.

While some clinical research studies range from evaluating new drugs to medical devices, others search for better ways to prevent disease, diagnose cancer and improve patients' quality of life.

We have more than 300 clinical trials available at any given time, covering a broad range of subjects.

To find out more or to enroll a patient in one of our clinical trials call:
