TESTS AND PROCEDURES

Liver Doppler Ultrasound

An ultrasound (sonogram) test uses sound waves to project an image. This allows the doctor to view organs and areas within the body. A small, hand-held device called a transducer is placed on the skin over the area to be examined. The sound waves from the transducer are reflected off the internal organs back to the transducer. The sound waves create an image on a video screen. The images are seen and captured in real time, showing movement.

A liver doppler ultrasound looks at:

- The liver.
- Its blood vessels (arteries and veins).
- Blood flow to and from the liver itself.

Images of the gallbladder, pancreas and spleen also are done as part of this exam.

The test, done in the Ultrasound department, takes about 60 minutes.

Before the Test

Do not eat or drink anything after midnight the night before the exam. This includes gum or candy. You may take needed medicines with only small sips of water. For best results, this test should be done in the morning.

On the day of the exam, plan to arrive 15 minutes before your test time. Be sure to bring:

- Your doctor's written order for the test.
- A list of allergies.
- A list of all your current medications (prescription, overthe-counter, and herbals).
- Medical insurance information.
- Medicare card (Medicare patients only).

Please come to the Galter Pavilion, 201 E. Huron St., and check in at the 4th floor reception desk.

Do not eat or drink anything after midnight the night before your exam.

Parking is available for patients and visitors in the garage at 222 E. Huron, across from the Feinberg and Galter pavilions. For discounted rates, please bring your parking ticket with you. Tickets can be validated at the Customer Services Desks on the 1st and 2nd floor of the Feinberg and Galter pavilions; 1st floor of Prentice (including the Prentice 24-hour desk near the Superior entrance).

A sonography technologist (tech) will escort you to the exam room. Then you will change into a hospital gown, leaving your underwear on.

During the Test

You will be assisted onto an exam table. While lying on your back, a warm, clear gel will be applied to your abdomen. The tech then will slowly move the transducer over that area, using light pressure. The transducer will transmit sound waves to a monitor, where the images can be seen and saved for later review.

You may see the images on the monitor and hear some sounds as the tech records the blood flow.

During the exam, you may be asked to:

- Take in a deep breath and hold it.
- Turn onto each side, so that certain images can be obtained.

Before the exam is complete, the radiologist will review the images. If needed, portions of the exam may be repeated.

After the Test

After the exam, the tech will provide towels to help remove the gel.

You may resume your normal diet and activities. The results will be sent to your doctor within 5 working days.

Health Information Resources

For more information, visit one of Northwestern Memorial Hospital's Health Learning Centers. These state-of-the-art health libraries are located on the third floor of the Galter Pavilion and on the first floor of the Prentice Women's Hospital. Health information professionals are available to help you find the information you need and provide you with personalized support at no charge. You may contact the Health Learning Centers by calling 312-926-LINK (5465) or by sending an e-mail to hlc@nmh.org.

For additional information about Northwestern Memorial Hospital, please visit our Web site at www.nmh.org.
