Ileostomy Diet Guidelines

An ileostomy is a surgical opening in the abdomen in which the lower end of the small intestine (ileum) is brought to the skin surface. The opening in the ileum at the skin is called a stoma. The stoma becomes the exit for all bowel movements and gas. An ileostomy affects the way your body digests and absorbs nutrients. This brochure will help you follow a diet that will decrease symptoms such as gas, odor, and stools that are too loose or too firm.

Nutrition After an Ileostomy

As you recover after surgery, follow a low fiber diet (see Appendix 1).

- **Choose:** cooked or processed fruits and vegetables, refined (white) grains, dairy as tolerated.
- **Avoid:** raw, unpeeled fruits and vegetables, nuts, beans, seeds, whole grains (such as brown rice, whole grain pasta, wheat bread).

Adding Foods Back into the Diet

- Starting 6 weeks after surgery, add 1 new food every few days. Start with foods that you were able to eat without problems before surgery.
- Slowly add fiber foods back into your meals to allow your body to get used to them.
- Some foods may cause symptoms, such as gas, odor, or diarrhea.
- It is best to keep a list of foods that cause these symptoms. If a certain food causes symptoms, avoid it for 2 to 3 weeks. Then, try it again in small amounts to see how your body reacts to the food.
- Be aware that some foods can cause blockage at the stoma site.

To Prevent Blockage

- Eat slowly and chew foods thoroughly.
- Avoid fruit skins and vegetable skins, salad greens, dried fruit, tough and fibrous raw fruits and vegetables (celery, coconut, pineapple), nuts, whole grains, tough fibrous meats and sausage casings.
To Reduce Gas and Prevent Unpleasant Odors

- Avoid drinking with straws, and avoid carbonated beverages and smoking or chewing tobacco. These things can cause you to swallow air and lead to gas production.
- Your body will release gas about 2 to 4 hours after eating gas-producing foods.
- Limit fruit skins and vegetable skins.

To Prevent Diarrhea and Help Thicken Stool

- Avoid spicy, fried and greasy foods.
- Avoid beverages or foods high in sugar or artificial sweeteners (such as sorbitol, mannitol or zylitol). They can cause diarrhea and increase output.
- Choose grains with less than 2 grams of fiber per serving.
- Limit caffeine and alcohol.
- If you feel unwell after eating dairy foods, try lactose-free products such as:
  - Lactaid® milk
  - Lactose-free yogurt
  - Non-dairy milk/cheese/yogurt products (such as almond or soy products)
- Once you start adding fiber to your meals, add foods such as whole grain pasta, grains, rice, potatoes, fruits and vegetables to provide bulk to the stool and slow movement of stool through the intestine. This will help to lessen diarrhea.

Other Important Tips to Remember

- Some food may change the color of your stool.
  - Beets and food with red dye may turn stool red.
  - Asparagus, broccoli and spinach may darken stool.
- Eat slowly and chew foods thoroughly to a “mashed potato” consistency.
- Eat small, more frequent meals instead of large meals. Try 5 to 6 small meals instead of 3 large meals per day.
- Eat on a similar schedule every day. This will help your body absorb nutrients from foods and reduce gas production.
- Do not skip meals. This can cause the small intestine to be more active, increasing gas and watery stool.
- Eat your largest meal during the middle of the day to avoid high ostomy output at night.
- If you are losing weight, avoid high-sugar supplements such as Ensure® or Boost®, as they may increase your output. Instead try low-sugar supplements with less than 10 grams of sugar per serving. Examples include:
  - Carnation® Instant Breakfast Essentials™ No Sugar Added
  - Boost Glucose Control®

Try adding protein powders to foods and beverages to add calories and protein.
If you do not like drinking nutrition supplements, try eating high calorie/high protein snacks. Examples include:
- 5 saltine crackers with 2 ounces of cheddar cheese (provides about 290 calories and 15 grams of protein).
- 4 graham cracker squares with 2 tablespoons of peanut butter (provides about 250 calories and 9 grams of protein).

**Food Recommendations after Your Ileostomy**

<table>
<thead>
<tr>
<th>Foods that may help thicken loose output</th>

Dehydration

Dehydration occurs when your body loses more fluid than it is taking in. This can cause a dangerous imbalance in the way your body functions. If you have high volumes of output (diarrhea) from your ostomy or are vomiting, you may be at risk for dehydration. Stoma output of more than 1 liter (1000 mL) per day is considered high output. If this occurs for more than 24 hours, be sure to:

■ Avoid foods that may be contributing to diarrhea.
■ Increase foods that may help slow or thicken output (see table on page 3).

If you have watery output for more than 24 hours, contact your health care provider. Also, be aware of the signs and symptoms of dehydration which include:

■ Thirst
■ Lethargy
■ Dry mouth
■ Decreased urine output
■ Dizziness when standing up
■ Muscle or abdominal cramps

Keep Well-hydrated

You will probably need more fluids than most people, especially if you increase your activity or perspire.

■ Drink a minimum of 8 to 10 cups of liquids per day. However, to avoid flushing foods through too quickly, drink fluids 30 minutes after a meal or snack. This will help your body absorb nutrients better.
■ Sip on liquids throughout the day.
■ Avoid high-sugar drinks, alcohol, and caffeine-containing beverages.
■ Try to remember to drink a glass of liquid whenever you empty your pouch to help you stay hydrated.
■ Drink plenty of water, but it is also important to include drinks that rehydrate your body and keep your electrolytes balanced.

Rehydration Drinks

If you have high ostomy output, you may need a rehydration drink to replace your fluids. Some commercial sports drinks may increase ostomy output due to sugar or sugar-free sweeteners. Instead, try the following drinks:

■ Pedialyte®
■ Rehydralyte®
■ Ceralyte®
■ EqualLyte®
■ DripDrop®

There are several recipes you can use to make your own rehydration drinks.
