Upright Tilt Table Test

Your doctor has suggested that you have an upright tilt table test. Each person has receptors in the heart that help control blood pressure and heart rate. Sometimes these receptors are triggered at the wrong time. This can prevent the heart from beating fast and strongly enough to supply the proper amount of blood to the brain. The decreased blood supply can make you feel “lightheaded,” “dizzy,” or “sweaty.” You may even faint. This feeling of “passing out” or “fainting” is called syncope. A tilt table test helps your doctor to find out why you are fainting and how to treat you.

Before the Test

**At home:**
- Do not eat or drink anything for 6 hours before the test.
- Take your usual medications with small sips of water, unless you are told otherwise.
- Wear comfortable clothes and shoes (no high heels) to the test.

Day of the Test

On the day of your test, please come to the Galter Pavilion, 251 East Huron Street. Take the visitor elevators to the 8th Floor, and stop at the Reception Desk by the elevators to check-in. The person at the desk will let us know you have arrived. You may park at the Northwestern Memorial parking garage, across from the hospital at 222 East Huron Street. Please bring your ticket with you for validation.

If you need to change or cancel your test, please call the EP Cardiology Clinic at 312-695-4965 as soon as possible.
During the Test

The tilt table test takes place in the Electrophysiology Lab.

At the hospital you will:

- Change into a gown for the test (underwear may be left on).
- Have an IV (into the vein) line started in your arm.
- Have your blood pressure and heart rate monitored.

You will lay on a table that has a pillow and a safety strap. It will be raised from a flat position to a standing position (upright). You will be upright for 40 to 60 minutes. If you feel dizzy or faint, your blood pressure and heart rhythm will be recorded. The table will be returned to the flat position and the test will be over.

If dizziness, lightheadedness or fainting are noted during the test, you may be started on an oral medication. The test may be repeated in about 1 to 2 weeks to see if the medication is working.

After the Test

The IV line and cardiac monitor will be removed. You will be able to resume your normal activity and diet.

If you have any questions please contact the Electrophysiology nurses at 312-695-4965.

Health Information Resources

For more information, visit Northwestern Memorial Hospital’s Alberto Culver Health Learning Center. This state-of-the-art health library is located on the 3rd floor of the Galter Pavilion. Health information professionals are available to help you find the information you need and provide you with personalized support at no charge. You may contact the Health Learning Center by calling 312-926-LINK (5465) or by sending an e-mail to hlc@nm.org.
