

# 3D Mammography

## And Complete Breast Health Services

At Cadence Health, you'll find the latest breast imaging technology. Both CDH and Delnor offer 3D mammography (also known as digital breast tomosynthesis).

When used in conjunction with 2D digital mammography, research shows that 3D mammography can significantly improve the early detection of breast cancer in these groups of women.

### 3D mammography

3D mammography produces 3D images of the breast from multiple angles using a small rotating digital scanner. Using this technology, radiologists can move and enlarge the images to view any area of concern. When used in conjunction with 2D digital mammography, this increases the detection of smaller breast cancers earlier and provides greater accuracy in pinpointing tumor size and location.

Typically 3D mammography is performed on women who have been previously identified as having dense breast tissue, those who have a family history of breast cancer or who may be at a higher risk for developing the disease.

### 3D MAMMOGRAPHY IS PROVEN TO:

Detect smaller breast cancers earlier

Provide greater accuracy in pinpointing tumor size and location

Reduce the number of patients who require follow up testing

### Complete breast health services

Cadence Health brings you convenient access to the most advanced, comprehensive breast imaging technology, most offering same-day results.

### SERVICES INCLUDE:

Screening digital mammograms

Diagnostic mammograms with computer assisted diagnosis (CAD)

3D digital tomosynthesis mammograms

Breast MRI and MRI-guided biopsies

Breast ultrasound and ultrasound guided biopsies

Self-referred screening mammograms (available only at Delnor Hospital)

Stereotactic guided breast biopsies

Tomographic guided breast biopsy

Bone Density Scans (DEXA)

To schedule an appointment at the Breast Health Center at CDH or the Breast Health Center at Delnor Hospital, please call 630.933.5000. TTY for the hearing impaired 630.933.4833.
