

# Lynn Sage Comprehensive Breast Center *Section of Breast Imaging*

Welcome to the Lynn Sage Comprehensive Breast Center. We are proud to offer you complete diagnostic testing services. Our state-of-the-art Center is staffed by radiologists who specialize in breast imaging, licensed mammography technologists, certified sonographers who conduct ultrasounds, and highly trained nurses. The Center is well regarded on regional, national, and international levels.

*Our goal is  
to provide  
accurate and  
complete  
testing in an  
efficient and  
caring manner.*

Comprehensive breast imaging provides a more in-depth exam for the individual with a history of or current breast problems. The imaging and our services are tailored to your specific needs and may include:

- specialized mammogram views
- breast ultrasound
- “interventional” procedures, such as needle aspiration and stereotatic needle biopsy

Our expert staff will explain these exams should they be recommended for you and answer any questions that you may have.

To avoid undue stress and repeat visits, the radiologist will review your exam results after the tests are completed. As needed, added exams may also be done during this appointment. Since these exams are tailored to the individual patient, testing and wait time will vary. It is difficult to predict how long an individual’s exam will take due to the uniqueness of each patient. Staff will update you at regular intervals about the progress of your exam.

Please remember that we are committed to providing the necessary time to ensure that you receive a thorough, comprehensive and high quality evaluation. We appreciate your understanding and help in meeting our goal and commitment to you.

You will receive a summary of your mammogram results on the day of the test. Should you have any questions about your results, feel free to call us (312/926-8822) or your doctor.

Our staff is most happy to answer your questions or concerns. We are pleased that you chose Northwestern Memorial Hospital’s Lynn Sage Breast Center.
