

# Stroke Program Services

## Fiscal Year 2025

The Stroke Program at Northwestern Medicine Marianjoy Rehabilitation Hospital provides comprehensive rehabilitation care to people with activity limitations due to a neurologic impairment.

Our program aims to:

- Restore health.
- Decrease the effects of an injury.
- Reduce activity limitations.
- Improve patients' abilities.
- Help patients learn how to meet daily needs.
- Support patients' participation in their community.

We help patients maximize their physical, social, mental (cognitive) and communication abilities. Daily medical management is a key part of the program. It helps address existing health problems and prevent complications.

The average age of patients treated at Northwestern Medicine Marianjoy Rehabilitation Hospital for stroke is 71 years. The average length of stay is 15 days.

### **Program costs**

Our staff talks with each potential patient about fees, costs and paying for our services. Payer sources may include Medicare, Medicaid and private insurance plans.

### **Where we provide care**

Our program has 40 inpatient beds in the 1 East Unit and the 1 West Unit. Sometimes, we may need to place patients in another unit. When that happens, we offer the same level of services that we provide in the 1 East Unit and 1 West Unit.

### **When we provide care**

Our nurses provide care all day, every day. We will closely monitor and adjust your therapy schedule as needed to help you meet your goals. Therapy is typically provided during daytime hours on weekdays. Therapy schedules are closely monitored and adjusted. If needed, you may receive therapy on weekends to ensure your goals are achieved. This may include:

- Physical therapy
- Occupational therapy
- Speech therapy

One of our physicians will be on call all the time, and a resident physician will be on-site 24/7.

We offer psychology services and spiritual care to all patients. These services are available to all patients and are typically available during normal business hours.

## Referrals

---

We accept referrals from many different sources, including:

---

Social workers or discharge planners

Physicians

Community health agencies

Independent healthcare facilities and agencies

Residential living facilities

Vocational guidance centers

Insurance representatives, such as:

- Workers' compensation specialists

- Health management organization (HMO) representatives

Patients, their families and loved ones

---

## Admission

Marianjoy Rehabilitation Hospital will admit and assign you to the right level of care based on your diagnoses and medical need.

We provide services to patients who can participate in and benefit from treatment, regardless of race, creed, color, sex, age, religion, disability, marital status, membership in military forces, sexual orientation, national origin, or any other basis prohibited by law.

We offer interpreter services and educational materials in many languages. We will work with you to determine how we can best meet your cultural needs.

### Admission criteria

This program is only for adults who are 18 and older.

---

We will only admit people who have had a stroke with 1 of the following:

---

Left body involvement (right brain involvement)

Right body involvement (left brain involvement)

Bilateral involvement

No paresis, with other neurological deficits such as:

- Cognition issues

- Swallowing issues

- Balance issues

---

Acute inpatient rehabilitation must be a medical necessity. This type of medical need is outlined below.

---

All of the following must apply to you:

---

You need close medical management that requires a physician and nurse to be available for 24 hours a day in a hospital setting.

You can participate in and benefit from 3 hours of therapy every day.

You need a coordinated multidisciplinary team approach for your care.

You have realistic rehabilitation goals and can expect major improvement.

---

In addition, you must meet these other criteria:

---

Your condition is medically stable, but still needs close medical management. If needed, the program medical director can review your situation to help determine if inpatient rehabilitation is right for you.

You do not have any limitations that keep you from actively participating in an intense level of rehabilitation.

Your mental and emotional status is stable enough for you to

- Fully participate in therapy.

- Be safe with the supervision this program provides.

---

# Stroke Program Services (continued)

## Our services

### Education

We will set up education appointments for you and your loved ones during your stay. This will help you and your support system:

- Experience everyday activities and movement.
- Learn about your rehabilitation plan and goals.

You will get a patient and family education program binder to use. Your care team will review educational material and instructions with you, and then put it in the binder.

Our caregiver support group is open to your support system members.

### Direct services

---

Marianjoy employees provide these services:

---

Case management and social work

Laboratory services

Assistive Technology Center at Marianjoy

Nursing

Nutrition services

Occupational therapy

Pharmacy

Physical therapy

Psychology

Radiology (X-ray and CT)

Respiratory therapy

Speech therapy

Spiritual care

Swallowing Center at Marianjoy

Tellabs Center for Neurorehabilitation & Neuroplasticity

Physical medicine and rehabilitation (physiatry)

Wheelchair and Positioning Center at Marianjoy

Orthotics and prosthetics	

---

## Program team

---

### Attending physician

---

Leads your care team

Manages your care

Writes orders (prescriptions) for services such as:

- Therapies
  - Medication
  - Family training
  - Special procedures
- 

### Resident physician (physician in training)

---

Manages medical care under the attending physician's supervision

Available on-site 24/7

---

# Stroke Program Services (continued)

---

## Nursing staff

---

Assesses and treats you

Helps you and your loved ones learn about:

- Medication
- Pain
- Skin care
- Care planning
- Bowel and bladder function
- Safety and staying healthy

Encourages you to use skills you learn in therapy

---

## Case manager

---

Coordinates your care

Helps you communicate with your family

Creates a discharge (leaving) plan, including referrals and information on equipment and community resources

---

## Physical therapist

---

Helps you improve your functional mobility skills related to:

- Bed mobility
- Transfers to and from chair and wheelchair (if needed)
- Stairs
- Walking
- Balance
- Pain management
- Endurance

Updates you and your family on skills you learned

---

---

## Occupational therapist

---

Helps you perform everyday activities, such as:

- Dressing
- Bathing
- Toileting
- Bathroom transfers

Recommends equipment to help you care for yourself

Updates you and your family on skills you learned

---

## Speech therapist

---

Treats swallowing disorders

Suggests diets to help you safely and efficiently eat by mouth

Teaches you and your family about communication and cognitive-communication disorders

Provides counseling

---

## Psychologist

---

Assesses mental and emotional functioning

Provides treatment as needed

Educates you and your family to address any adjustment problems

Talks about counseling for drug or alcohol problems, if needed

---

## Hospital chaplain (non-denominational spiritual care)

---

Supports your well-being and that of your family

Provides well-being services (such as hand massage, aromatherapy, meditation groups and pain management groups)

---

# Stroke Program Services (continued)

## Discharge plan

When we discharge patients from the program, they often go to:

- Home (with or without additional services)
- Extended care
- Assisted living facility
- Subacute or skilled nursing facility
- Acute care hospital
- Long-term acute care hospital

### Discharge criteria

You must meet our program requirements and make meaningful functional improvements to stay in our program. If you do not need daily hospital medical management, we will help you plan a transfer to another level of care, such as outpatient rehabilitation.

We consider patients to be ready for discharge when they do 1 or more of the following.

---

The patient:

---

Has met their goals

Needs a different level of care because their status changed

Is not making progress toward their goals

Behaves in ways that keep them from fully participating in therapy

Needs acute care in a hospital

Asks for discharge or transfer to another care facility (Their family may also ask for this.)

---

Your discharge plan will include your goals (and the goals of your support system) so you can go home or to another place as you are able.
