

DIET AND NUTRITION

Diet and Nutrition During Head and Neck Cancer Treatment

Treatment of head and neck cancer may include chemotherapy, radiation therapy or even surgery. A healthy diet is an important part of your journey before, during and after treatment. Your body will likely need extra calories and protein to:

- Keep your strength up
- Keep your weight stable
- Improve your recovery time
- Fight infection
- Manage symptoms

Preventing weight loss

During treatment, it is important to prevent weight loss. You may not be able to eat the same portions or textures of foods as before, so you should choose high-calorie and high-protein foods. Some people have a loss of appetite or changes in taste. It may be easier to eat smaller meals more often. Try to:

- Eat a snack or small meal every 2 to 3 hours instead of waiting until you are hungry
- Choose soft, moist foods if you are having trouble eating a regular diet
- Drink a calorie- and protein-dense nutrition supplement such as BOOST Plus® or Ensure Plus®

Choose a variety of foods that have both extra calories and protein. If you have any questions, ask your dietitian for advice.

If you have any

questions, ask

your physician

or dietitian.

High-calorie/high-protein diet

Your body uses calories and protein to fuel and repair your body tissues. A high-calorie/high-protein diet can help keep your body strong during your treatment. The types of foods and textures of your diet may change throughout treatment and even after your treatment is done. You may need to choose soft, moist foods or a liquid diet to ease side effects of your treatment.

High-Calorie Foods	Healthy Menu Ideas
Butter, margarine, cream cheese or vegetable oils	Spread on soft breads or pastries
	Melt on potatoes, rice, soft pasta, hot cereals or soft-cooked vegetables
Heavy whipping cream or sour cream	Add to mashed potatoes, pureed soups, desserts or eggs
Avocado	Garnish cream- or bean-based soup
	Blend into a smoothie or shake
	Top scrambled eggs or omelets
Creamy peanut butter or other smooth nut butter	Mix into smoothies or shakes
	Spread on bananas
Ice cream (dairy or non-dairy milk)	Blend with a liquid nutrition supplement and your favorite fruit for a high-calorie shake
	Choose premium types that have more calories or add toppings like whipped cream
Mayonnaise	Add extra to chicken, tuna, egg or potato salad
Canned coconut milk or canned coconut cream	Add to soups, desserts, hot cereals, pudding, shakes or smoothies

High-Protein Foods	Healthy Menu Ideas
Eggs	Make omelets or scrambled eggs with extra cheese
	• Use to make custards, quiches, soufflés or egg salad
Milk, high-protein milk or soy milk	 Use instead of water in hot cereals, hot cocoa or soups
	Blend with fruit and yogurt to make smoothies
Yogurt (including Greek and Icelandic types)	Make a parfait by topping with fruit or gelatin
	Garnish cream or bean soups
	Mix into sauces, dressings and dips
Cottage cheese or ricotta	Eat with fruit
	 Add to pasta dishes, potatoes or casseroles
	Fold into pancake batter or desserts
Tofu	Use instead of eggs for a breakfast scramble
	Blend into soups, sauces, smoothies or shakes
	Can be used in desserts such as chocolate mousse

Beans or lentils	Puree to thicken soups
	 Top refried or mashed beans with cheese, avocado and sour cream
Canned tuna, crab or salmon	Mix with extra mayonnaise or yogurt (for softer texture and more moisture)
	Make patties or croquettes
Ground beef, pork or poultry	Make meatloaf or meatballs
	Use in recipes with sauces or gravy such as stews and casseroles

Fortified milk

Fortified milk can add more calories and protein to your diet. You can use it instead of milk in any recipe. There are also a variety of high-protein milk options at the grocery store. You can use them when making:

- Hot cereals
- Mashed potatoes
- Soups
- Smoothies
- Shakes

Homemade Fortified Milk	Homemade Non-Dairy Fortified Milk
Mix together:	Mix together:
• 1 cup dry milk powder	• 1 cup non-dairy milk (almond or soy milk)
• 1 quart regular milk	• 1 scoop protein powder

Sample recipe

Peanut butter and banana smoothie

- 1 cup fortified milk
- 1 tablespoon creamy peanut butter or other smooth nut butter
- 1 frozen banana

Combine ingredients in a blender. Blend until you get the texture you want. Pour into a glass. For a cool treat, add ice cream or frozen yogurt to boost calories.

Sample 1-day menu

Breakfast	Morning snack
Oatmeal or other hot cereal made with fortified milk or high-protein milk	Whole milk plain yogurt with fresh or canned peaches and honey
Mix in creamy nut butter, butter, vegetable oil-based margarine, coconut cream, applesauce, apple butter, fruit preserves or soft banana	
Lunch	Afternoon snack
Lentil soup (puree in blender if desired)	High-calorie, protein-dense nutrition supplement of your choice
Soft bread and butter for dipping	supplement of your choice
Cottage cheese with pears	
Dinner	Evening snack
Meatloaf and mashed potatoes with extra	Premium ice cream, non-dairy ice cream,
butter and gravy	pudding or mousse with toppings of your choice
Creamed spinach	

Helpful tips

For dry mouth

- Drink plenty of fluid each day. Flavored waters, fruit nectars, coconut water, flavored milk or nondairy beverages may be more appealing if you have taste changes.
- Lemon drops, sugar-free mints or sugar-free gum may help keep your mouth moist.
- Choose soft, moist foods rather than dry-textured or crunchy foods.
- Add sauces, gravies, applesauce, sour cream, heavy cream or broth to moisten foods.

For sore mouth or throat

- Avoid foods that are acidic, such as orange juice or tomato sauce. Avoid foods that are spicy or salty.
- Eat mild foods such as custards, puddings, creamy soups, milk or non-dairy milk beverages.
- Cold foods may help soothe your mouth and throat.
- Drink smoothies, shakes or liquid nutritional supplements such as BOOST Plus or Ensure Plus if you cannot eat enough food to meet your needs.
- Use a blender or food processor to make foods smoother and easier to swallow.

For trouble swallowing

Your physician may refer you to a speech pathologist during treatment. They can give you exercises to do to help you swallow more easily, and cough or choke less when you eat and drink.

Contact a dietitian

A dietitian can help you plan what to eat and drink during your cancer treatment journey. They can also help you:

- Manage your symptoms that may affect your ability or desire to eat
- Improve your recovery time by helping you stay well-nourished and hydrated
- Reduce problems by helping you maintain good nutrition

If you need a feeding tube during your cancer treatment, a dietitian show you how to use your tube and teach you how to take care of it.

If you have not talked with a dietitian, please call 312.695.0990 (TTY: 711) to schedule a visit.
